

TRẦN MẠNH KHANG

Software Engineering Fresher

khangjaki12@gmail.com • My Tho, Tien Giang, Vietnam • github.com/KhangTranManh

SUMMARY

Final-year Software Engineering student at Ton Duc Thang University (graduating 2026) with hands-on experience across AI/ML model development, full-stack web development (React, Node.js), and software quality assurance. Completed an AI Engineer internship at Concentrix building and testing QA/QC models, and an AI/ML exchange program at JeonJu University (Korea, 2024). Seeking a Fresher role in AI Engineering or Software Development to apply strong skills in model building, prompt engineering, fine-tuning, and end-to-end testing.

WORK EXPERIENCE

AI Engineer Intern | Concentrix, Vietnam

May 2026 – Jul 2026

- Built and evaluated QA/QC classification models to automatically assess call quality and compliance for the telesales team; the model was deployed into production and is actively used in the telesales evaluation workflow.
- Fine-tuned models using Unsloth, monitoring training/validation loss and validating performance on real production data.
- Cleaned and processed raw data to handle errors and inconsistencies, and verified label quality to ensure reliable training data.
- Performed manual testing of AI models and bots, verifying functional correctness, accuracy, and stability before deployment.
- Gained hands-on experience with prompt engineering to design and refine prompts that improved chatbot response quality.
- Assisted in fine-tuning language models and conducted systematic testing of bot models, documenting issues and edge cases.
- Contributed to building and testing AI agent workflows using LangChain/LangGraph, integrating tools and evaluating agent responses as part of the QA/QC process.

EDUCATION

B.Eng. Software Engineering | Ton Duc Thang University, Vietnam

2021 – 2026

- GPA: 3.1/4 (Vietnamese scale)
- Exchange Program, JeonJu University, Korea (2024) — AI, Machine Learning, Deep Learning

SKILLS

Programming: Python, Java, JavaScript, TypeScript

Web Development: React, Node.js, Express, REST APIs, MongoDB, Docker

AI / ML: PyTorch, TensorFlow, OpenCV, YOLOv8, CLIP, FAISS, Unsloth, Prompt Engineering, Model Fine-tuning

Agent Frameworks: LangChain, LangGraph

Testing & QA: Manual Testing, Model Evaluation & QC, Postman, Git

LANGUAGES

Vietnamese: Native | **English:** IELTS 6.0

PROJECTS

Fashion E-Commerce Website | Personal Project

2025

React · TypeScript · Node.js · Express · MongoDB · Docker

- Built a full-stack e-commerce platform with a microservices architecture — API Gateway plus three independent services (User, Product, Order), each with its own MongoDB database.
- Implemented JWT-based authentication, shopping cart, and order management; manually tested all REST API endpoints using Postman.
- Containerized all services using Docker; used React Query and Zustand for frontend state management.
- Currently designing a Python/FastAPI recommendation engine (collaborative and content-based filtering) as an upcoming service.

Autonomous Vehicle AI | JeonJu University, Korea

2024

- Processed raw sensor and camera data to build training datasets for real-world driving scenarios.
- Built a real-time object detection pipeline with YOLOv8 and PyTorch, achieving an mAP of 0.87 on the validation set.
